

ITALIAN CONSTRUCTION
TECNOLOGICAL COMPANY FZE - LLC

History

Alberto Postiglione was born in 1960 in Chieti, Italy. When he was 16, he started to work as a builder and carpenter and over the years he has acquired the technical experience that has made him well known in the field. His achievements and major projects include property renovations, construction of villas, housing estates, hotels, plants, shopping malls, sport centres, and urban architectures.

Who we are

The firm, touted in 2008, has a remarkable operational structure, and is endowed with specific equipment and vehicles; it uses high-level technical tools that guarantee superior results than the average competitors. Reliability and accuracy are our main characteristics.

Quality and high-standard Italian design are guaranteed by the employment of workers with ten-year experience and the use of state-of-the-art equipment.

ALBERTO COSTRUZIONI srl boast the realization of over 600 keys-in-hand apartments, and 30 private villas, and collaborations for several Malls construction.

Technology, skills and competences

Great organizational skills and management of national and international projects aimed at the highest quality and customer satisfaction with competitive costs within commitment. Considerable technical background in the field of ecological building and mastery of the various design and construction stages. Individual-focused management of human resources, ability to motivate staff in the carrying out of duties. Experience in the direct and indirect management of working yards and assigned staff.

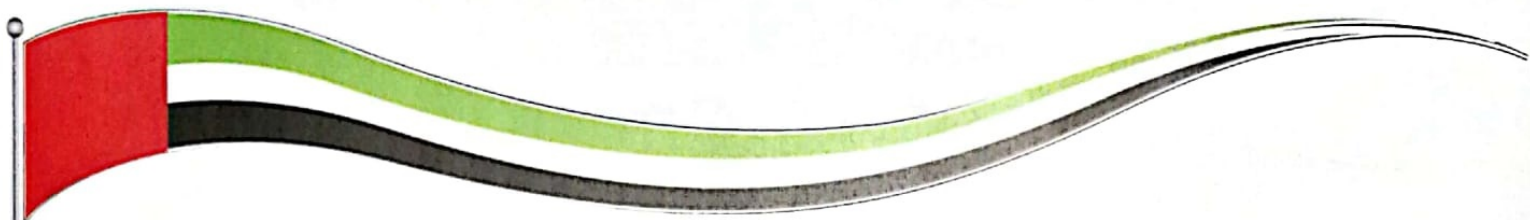

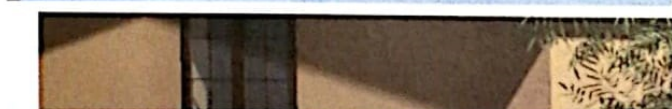

The company is specialized in the manufacture of anti-seismic reinforced concrete structures, self-supporting modular structures with high-level seismic, energetic and acoustic performances, and in the construction of eco-sustainable houses characterized by low energy consumption and very low environmental impact. In addition, the company has designed and developed new construction techniques aimed at guaranteeing climatic comfort and low energy consumption to homes in sub-tropical countries.

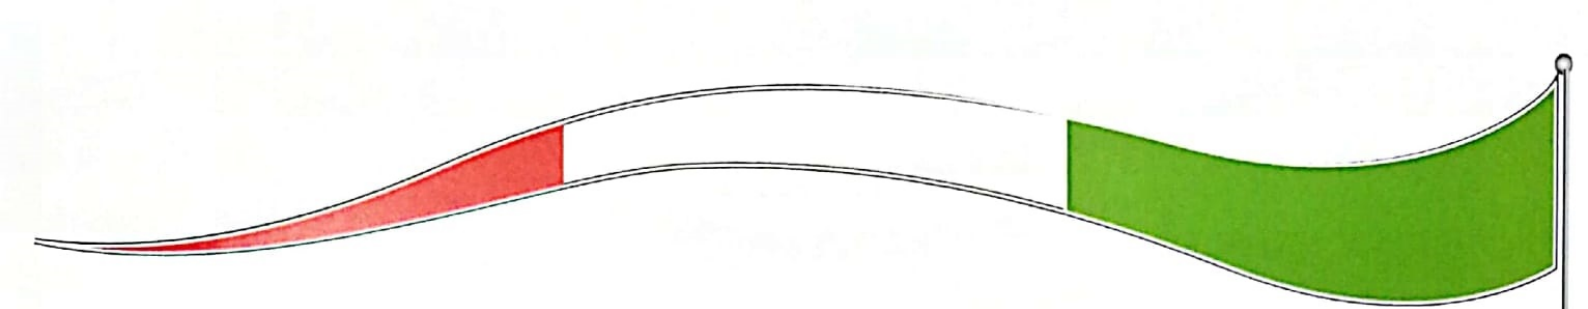

Therefore, our dwellings will have an interior microclimate able to prevent the formation of moulds and condensates thanks to the continuous exchange of natural air natural with the external environment.

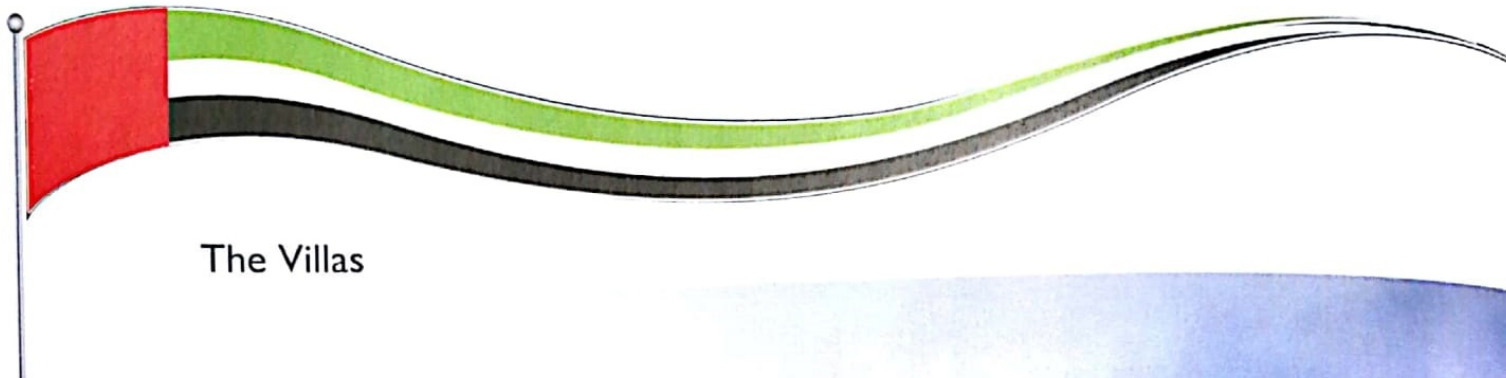

For our constructions we use technological materials: anti-seismic, load-bearer, high-temperature insulating, energy saving, fire-proof, cyclones and explosion-resistant...
